Supertunia Hanging Baskets

Sun/Partial Sun

Let dry between watering

Feed every other watering

The Supertunia varieties are quite commonly used in a high light and/or strong sun area either in hanging baskets or planters. Supertunias are almost foolproof for use in and around a hot sunny location if they are properly taken care of. Weekly maintenance will promote growth and provide a beautiful basket all season long. It is our recommendation that you consider trimming the baskets once a month during the growing season. Reducing the foliage by trimming approximately 25% will not only promote lush new growth, but it will protect the plant from getting leggy and too difficult to manage. Supertunias are heavy feeders, so watering with a Bloom Booster fertilizer is essential throughout the season. Common pests include aphids and Thrips, therefore monthly preventative treatments are encouraged.

Dipladenia/Mandevilla Hanging Baskets

Sun/Partial Sun

Very dry between watering

Feed every other watering

The Dipladenia/Mandevilla baskets are designed specifically for a hot sunny location or a location that is hard to reach on a regular basis. The Dipladenia/Mandevilla baskets can go for several days between watering and benefit from hot drought-like conditions. Commonly used in areas of intense sun and/or windy areas, it is recommended that these baskets be watered occasionally to initiate bud development and growth. Watering with Bloom Booster fertilizer is essential on a weekly basis to initiate and promote incredible flowering during the season. Common pests include Aphids, which are attracted to the sweetness of the bud and bloom. A monthly preventative spray is recommended. Hummingbirds are attracted to the rich red color, so be very careful not to harm the Hummingbirds when addressing any pest problems as we need to protect these beauties!

Calibrachoa 'Million Belles' Hanging Baskets

Sun/Partial Sun

Let dry between watering

Feed every other watering

The Calibrachoa 'Million Belles' varieties are commonly used in a high light and/or strong sun area, either in hanging baskets or planters. Calibrachoa 'Million Belles' are almost fool proof for use in and around a hot sunny location if they are properly taken care of. Weekly maintenance will promote growth and provide a beautiful basket all season. It is our recommendation that you consider trimming the baskets once a month during the growing season. Reducing the foliage by trimming approximately 15% will not only promote lush new growth but will protect the plant from getting leggy and too difficult to manage. Calibrachoa 'Million Belles' are heavy feeders, so watering with a Bloom Booster fertilizer is essential through-out the season. Common pest includes Aphids and Thrips, therefore monthly preventative treatments are encouraged.

Hybrid Begonia Hanging Baskets

Morning Sun/Shade

Let dry well between watering

Feed weekly

The Hybrid Begonia is known for its beauty during the summer and fall season. Large beautiful flowers will remain on the plant all season long if it is properly cared for. The Begonia families thrive in a shade to partial shade area, but can also be used in partial sun once they have become acclimated. When using the Begonia family in a full shade application, make sure that the soil condition stays on the dry to touch side; this will ensure that the plant remains strong and healthy. If overwatered, Begonias tend to rot and become weak in both the root system and foliage. The dry condition will protect the plant for longevity. Fertilize the plant on a weekly basis with a Bloom Booster fertilizer. Large mother style flowers will sometimes become detrimental to the strength of the plant so removing the largest flowers will protect the plant and still allow for smaller showy flowers to remain. Common problems include Aphids and powdery mildew. To prevent mildew, water plants in the morning hours and use sulfur based sprays to prevent mildew. Watering too much can be detrimental.

Hybrid Nonstop Begonias Hanging Baskets

Morning Sun/Shade

Let dry well between watering

Feed weekly

The Hybrid Nonstop Begonia is known for their beauty during the summer and fall seasons. Large beautiful flowers will remain on the plant all season long if it is properly cared for. The Begonia families thrive in shade to partial shade and can also be used in partial sun once they have become acclimated. When using Begonias in a full shade location, make sure that the soil condition stays on the dry to touch side. This will ensure that the plant remains strong and healthy. If overwatered, Begonias tend to rot and become weak in both the root system and foliage, so dry conditions will protect the plant for longevity. Fertilize the plant on a weekly basis with a Bloom Booster fertilizer. Large mother style flowers will sometimes become detrimental to the strength of the plant so removing the largest flowers will protect the plant and still allow for smaller showy flowers to remain. Common problems include Aphids and powdery mildew. To prevent mildew, water plants in the morning hours and use sulfur based sprays to prevent mildew. Watering too much can be detrimental.

Mixed Annual Hanging Baskets (within one container)

Full Sun/Partial Sun

Best to let dry well between watering

Heavy feeder

Mixed Annual hanging baskets will be gorgeous throughout the growing season if properly cared for. The more sun that is provided for the mixed containers, the more water that will be necessary to sustain the beauty of the plants during the season. It is recommended that a monthly light trim will not only encourage new growth and blooming, but protect one dominate grower from taking over the entire planter. Trim the stronger varieties a little heavier when grooming. Sun not only promotes growth and blooming, it will keep you busy watering, so pay close attention. We encourage you to use a Bloom Booster fertilizer to promote flowering, but an occasional Petunia acid food will help as well. Common problems include Aphids and Thrips. Light trimming not only helps with this but an occasional preventative spray will do wonders. It is essential to rotate the basket into the sun on occasion if used in a semi shaded area.

Divine Series Hybrid Impatiens Hanging Baskets

Sun/Partial Sun

Slightly dry between watering

Low/Medium feeder

The Divine series hybrid Impatiens hanging baskets are commonly used in an area that is a focal point when viewed from a close proximity. The beauty of the large brilliant flowers, and the sharpness of the vivid colors, not only adds to any accent area but the carefree approach taken when caring for this basket will be a benefit to all users throughout the season. Impatiens plants not only tolerate a high light area if properly taken care of, you can enjoy using them under an overhang or in a low light application once they have acclimated to the condition. Fun as a close visual accent plant, the common problems of Hybrid Impatiens are minimal. Occasional Aphids are attracted to the sweetness of the new growth and flowers, so a preventative is encouraged. Watering with an occasional Bloom Booster fertilizer is also encouraged. Watering too much can be detrimental! Unlike the regular bedding Impatiens, the Divine series hybrid Impatiens are not susceptible to the Downey Mildew problems affecting the everyday impatiens crop today, thank goodness!

Claridendron Hanging Baskets

Sun/Partial Sun

Very dry between watering

Feed every other watering

The Claridendron hanging baskets are designed specifically for hot sunny locations, or a location that is hard to reach on a regular basis. The Claridendron baskets can go for several days between watering and benefit from hot drought like conditions. Commonly used in areas of intense sun and/or windy areas. It is recommended that these baskets be watered occasionally to initiate bud development and growth. Watering with Bloom Booster fertilizer is essential on a weekly basis to initiate and promote incredible flowering during the season. Common pest problems such as Aphids are attracted to the sweetness of the bud and bloom. A monthly preventative spray is recommended. Hummingbirds are attracted to their rich red color.

Super Belles Hanging Baskets

Sun/Partial Sun

Let dry between watering

Feed every other watering

Super Belles varieties are quite commonly used in a high light and/or strong sun area either in hanging baskets or planters. Super Belles are almost foolproof for use in and around a hot sunny location if they are properly taken care of. Weekly maintenance will promote growth and provide a beautiful basket all season. It is our recommendation that you consider trimming the baskets once a month during the growing season. Reducing the foliage by trimming approximately 25% will not only promote lush new growth but will protect the plant from getting leggy and too difficult to manage. Super Belles are heavy feeders, so watering with a Bloom Booster fertilizer is essential throughout the season. Common pests include Aphids and Thrips, therefore monthly preventative treatment is encouraged.

Ivy Geranium Hanging Baskets

Full sun/Partial Sun

Best to let dry well between watering

Heavy feeder

Ivy Geranium hanging baskets will be gorgeous throughout the growing season if properly cared for. The more sun that is provided for the containers, the more water that will be necessary to sustain the beauty during the season. However, make sure that you don't get too heavy with the watering, they don't like soggy roots! It is recommended that a bi-monthly light trim will encourage new growth. Trim the stronger varieties a little heavier when grooming. Sun not only promotes growth and blooming but will keep you busy when watering, so pay close attention. Do not water Ivy Geraniums in the heat of the day as this can develop a condition call Edema, or blasting of the tissue cells. When the cold water rushes into a hot leaf surface it causing a series of bumps on the reverse side of the foliage, therefore water only in the am when the foliage is cool. We encourage you to use a Bloom Booster fertilizer to promote flowering. Common problems include Aphids and Thrips, so light trimming not only helps with this but an occasional preventative spray will do wonders. It is essential to rotate the basket into the sun on occasion if used in a semi shaded area to encourage even growth and flowering.

Torenia Hanging Baskets

Sun/Partial Sun

Slightly dry between watering

Heavy feeder

The beauty of the Torenia hanging basket wishbone shaped flowers, and the sharpness of the vivid colors, adds to any accent area. The carefree approach taken when caring for this basket will be a benefit to all users throughout the season. Torenia plants tolerate a high light area if properly taken care of, so you can enjoy using them under an overhang or in a low light application. Fun as a close visual accent plant, the common problems of Torenia are minimal. Occasional Aphids are attracted to the sweetness of the new growth and flowers, so a preventative is encouraged. Watering with an occasional Bloom Booster fertilizer is highly encouraged. Watering too much can be detrimental!

Bougainvillea Hanging Baskets

Sun/Partial Sun

Very dry between watering

Feed every other watering

The Bougainvillea hanging baskets are designed specifically for hot sunny locations or a location that is hard to reach on a regular basis. The Bougainvillea baskets can go for several days between watering and benefit from hot drought-like conditions. Commonly used in areas of intense sun and/or windy areas, it is recommended that these baskets be watered occasionally to initiate bud development and growth. Watering with Bloom Booster fertilizer is essential on a weekly basis to initiate and promote incredible flowering during the season. Common pest problems, such as Aphids are attracted to the sweetness of the bud and bloom, so a monthly preventative spray is highly recommended. Hummingbirds are attracted to the Bougainvillea's rich red coloring.

New Guinea Impatiens

Sun/Partial Sun

Slightly dry between watering

Heavy feeder

The New Guinea Impatiens hanging baskets are commonly used in an area that is a focal point when viewed from a close proximity. The beauty of the large Impatiens flowers, and the sharpness of the vivid colors, adds to any accent area. The carefree approach taken when caring for this basket will be a benefit to all users throughout the season. New Guinea plants tolerate a high light area if properly taken care of,

so you can enjoy using them under an overhang or in a low light application. Fun as a close visual accent plant, the common problems of New Guinea Impatiens are minimal. Occasional Aphids are attracted to the sweetness of the new growth and flowers; therefore, a monthly preventative is encouraged. Watering with an occasional Bloom Booster fertilizer is highly encouraged. Watering too much can be detrimental!

Moss Baskets/Fiber Baskets

Full/partial sun

Moist between watering

If you have never had one of our famous Moss or Fiber Hanging Baskets you are about to experience an incredible ride. The Moss and Fiber baskets that we grow are second to none. The time and expertise of our growers when designing and planting these baskets allow for fool-proof care if properly attended to. We encourage a daily visit to our Moss/Fiber baskets to ensure that the proper moisture level in the soil is maintained. Too little water in a sunny and/or windy area can cause a lot of problems if not properly attended to, so checking frequently is essential. A slight trim on occasion not only promotes new growth and flowering, but will ensure the baskets doesn't get so large and heavy the plant is damaged in a heavy rain or wind, so don't be afraid to trim on occasion. The Moss/Fiber in our baskets dries out quickly so daily heavy water is encouraged during the heat of the season. Common pest problems include Aphids and Thrips, so checking on a weekly basis is encouraged and doing a light trim and occasional preventative spray is encouraged. Lots of water runs through the Moss/Fiber baskets when watering, so using a slightly heavier Bloom Booster fertilizer concentrate is welcomed by the basket.

Fuchsia Hanging Basket

Medium to low sunshine desired

Keep moist

The Fuchsia hanging baskets are commonly used as a beautiful focal point in an entryway or hanging along an eve that gets slightly protected from the afternoon sunshine. Hot intense heat can be hard to manage when tending to a Fuchsia plant. The tricks that we encourage our customers to follow are simply to pay close attention to your Fuchsias on sunny days. Fuchsias can sometimes look like they are in need of attention, or water, but most of the time they are moist. Do not water a wilted Fuchsia if the soil is moist. This flagging condition generally is due to either extreme weather changes (such as two or three cloudy days, then a really warm sunny day) and the plant must accumulate to the conditions. Overwatering Fuchsias can be detrimental. When you do water a Fuchsia, give the plant enough

water to maintain a moist soil, but not in excess each time. Watering Fuchsias in the morning hours will prevent any powdery mildew problems once you start having cool nights. Checking weekly for Aphids and Mites will be helpful, and a simple preventative spray approach will allow you to enjoy your plant through the entire season. Fuchsias are heavy feeders, so a twice a week fertilizing with Bloom Booster is encouraged and essential to a wonderful blooming season. Hummingbirds love Fuchsias, especially the red varieties, so be careful with your sprays, we don't want to harm those beauties!
